ABSTRACT OF DISCLOSURE

A service point management system employs a computer for managing points issued to each customer who receives service according to the points. A point issue unit issues points to the customer according to transactions performed by the customer. A point accumulation unit calculates and accumulates the issued points. A point notification unit notifies the customer of point information. A customer identification unit identifies the customer according to customer identification data entered through a customer or store terminal. The point notification unit notifies the customer identified by the customer identification unit of the customer's cumulative point information before the customer carries out transactions.
